CC GS-9L cells were cultured and the VEGF AB subunits were isolated CC and sequenced. The reduced and carboxymethylated protein eluted CC as two peaks at approx. 23 and 25 ml that were of approx. equal CC area as determined by monitoring absorbance at 210 mm. Samples CC of the two protien subunitis isolated after reduction and CC carboxymethylation were each applied to polybrene-coated glass (fiber filters and their N-terminal sequences were determined. CC The peak of absorbance eluting at approx 25 ml (A subunit) yielded CC an amino terminal sequence Ala Pro Thr Glu Gly Glu Glu Lys Ala His CC an amino terminal sequence Ala Pro Thr Glu Beak of absorbance eluting CC at approx. 23 ml (B subunit) yielded the N-terminal sequence Ala CC at approx. 23 ml (B subunit) yielded the N-terminal sequence Ala CC Glu Val Val Gly Asn Xaa Ser Thr Glu Met Glu Val Val Pro Phe Asn CC Glu Val plus a nearly equal amount of a truncated form of the same sequence missing the first three residues. The missing X residue corresp. to an Asn in the cloned sequence. The missing X residue B chain peptides were recovered in nearly equal amounts supporting the interpretation that the two peptides combine to form an AB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 15

PATENT NO. 5219739

PATENT TISCHER, EDMUND G.; ABRAHAM, JUDITH A.; FIDDES, JOHN C.; MITCHELL, RICHARD L.

TITLE OF INVENTION: DNA SEQUENCES ENCODING BYEGF120 AND HYBEF 121 AND METHODS FOR THE PRODUCTION OF BOYINE AND HUMAN VAASCULAR ENDOTHELIAL CELL GROWTH FACTORS, BYEGF120 AND HYBER NUMBER OF SEQUENCES: 40

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/559,041

FILING DATE: 27-UTL-1990

PRIOR APPLICATION DATA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GROWTH FACTOR

                                                                                                                                                                                                                                                                                                                                                           Sequence of vascular endothelial cell growth factor VEGF 146\, amino acid residue subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Multiple cDNAs encoding alternative forms of the VEGF A-subunit were amplified using PCR primers as in Q23049 and Q23050. Three sets of clones were identified. Clone #12 encoded the 164 amino acid secreted form of VEGF A-subunit (see R2347). Clone #14 has a 135 bp 72bp insertion and thus encodes a 120 amino acid form and Clone #16 has a 71be deleted region lies between the second base of the Asn140 codon protein has Asn140 converted to Lys140.
                                                                                                                                                                                                                                                                                                                                                                                                     25-FEB-1993

        The present sequence represents a rat vascular endothelial growth factor II (VEGF II) A subunit variant with a conversion of Asn 140 to Lys 140, w53639. The present invention describes: (1) a mammalian vEGF II protein from W53639 or the first 115-135 amino acids of W53638; and (2) a mammalian vEGF II protein from W53638, w53639 or the first 115-135 amino acids of W53638; and (2) The growth factor is used for promoting vascular development and repair and for promoting tissue repair.

N.B. The present sequence is not given inthe specification but is derived from Fig 5 as stated in the claim.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-JUL-1998 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cys-Lys-Asn-Thr-Asp from polypeptide T38 (residues 164-168) were used to PCR amplify the central region of the cDNA for VEGF A chain. A single band migrating at 420 bp was gel purified, digested with Sall, ligated into pGEM32f(+) and sequenced. The nucleotide sequence cotannel (p4238) was used to design antisense and sense PCR primers to amplify the 5' and 3' ends of the cDNA. These 5' and 3' clones are denoted p5-15 and pw3, respectively. In addition to the cDNA coding the 164 amino acid secreted form identified by protein sequencing, two alternatively spliced cDNAs encoding a 146 amino acid and a 214 amino acid forms are cloned and sequenced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            W53640;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W53640

                                                                                                                                                                                                              This is the amino acid sequence of a 146 amino acid residue A subunit of vascular endothelial cell growth factor (VEGF). The invention relates to a purified and isolated VEGF C subunit amino acid sequence Y57025. VEGF exists in various microheterogenous forms, and is useful for the promotion of vascular development and repair. The invention also relates to human VEGF heterodimers AC or BC and homodimer CC, where A, B and C are subunit amino acid sequences. The VEGF AC, BC or CC amino acid sequences can be used in a tissue repairing pharmaceutical composition. The novel growth factors are useful for the production or coverage of artificial blood vessels with vascular endothelial cell. They are also useful for the induction of tissue growth and repair.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  XXXXXXXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                   The two forms of VEFG (Q10797 and Q10917) which arise through different message splicing, have different properties. In partic. Average splicing, have different properties. In partic. In Partic. The protein free to bind to VEGF receptor and increase the half-life and distribution of the protein in circulation, whereas hBEGF165 binds heparin strongly. The product can be used for angiogenesis and re-endothelialisation of inner vascular surfaces in wound healing, e.g. treatment of full-thickness wounds such as dermal ulcers, venous ulcers and diabetic ulcers, burns, in surgery, in balloon angioplasty and for the in vitro culturing of endothelial cells. Hybrid growth factors of PDGF and VEGF can exhibit a mitogenic profile between each factor and can be used for wound healing or as inhibitors of angiogenesis for e.g. preventing the growth of tumours.

VEGF analogues in which CYS residues are substd. are more stable. See also Q10791-93; Q10796-97; Q10806-08 and Q11099.

                                                                                                                                                                                                                                                                                                              The sequence of Q44260 contains an open reading frame corresponding to the 165 amino acid human vascular endothelial cell growth factor (hVEGF-165, see R38921). Alternative splicing of the sequence gives a shorter coding sequence which encodes the 121 amino acid hVEGF (see R42607). The full-length coding sequences can be generated using PCR with human foetal vascular smooth muscle

   This invention describes the novel preparation of biologically active dimers of recombinant human growth factors of the cysteine knot family starting from cellular inclusion bodies. Such dimers are are useful in pharmaceutical compositions and the method provides yields of 31-39.7%, in examples, compared with about 10% for the conventional method (see Biochemistry, 28 (1989) 2956). Y08278-Y08301 are human growth factor protein fragments used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents vascular endothelial growth factor (VEGF) 121. The specification describes a monoclonal antibody which is specific to VEGF 121, and a hybridoma producing this antibody. The antibody is used in a method for measuring the amount of VEGF 121 present in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

The products of the invention have angiogenic activity. The polypeptide can be used in pharmaceutical compositions for therapeutic or diagnostic use, e.g. for stimulating angiogenesis or tissue repair or for immunomodulation, e.g. by angiogenesis or tissue repair or for immunomodulation, e.g. by differentiation. Nucleic acids encoding the polypeptide can be used in the polypep

                                                                                                                                                     CC R91075-R91078 are human vascular endothelial growth factors (VEGFS).

CC DNA encoding a VEGF can be used to create a fusion protein (FP),

CC the cDNA of which includes a nucleic acid binding domain (NABD) and

CC encodes a heparin binding growth factor, HepGF (e.g. VEGF, FGF, HBEGF),

CC a protein synthesis inhibitor and opt. a linker imparting flexibility

CC to the FP. The FP can be used to target a protein synthesis inhibitor;

CC an antisense DNA sequence or an inhibitor of elongation factor 2, to a

CC cell carrying a HepGF receptor. The conjugates of the invention are

CC cused to inhibit cell proliferation in cells carrying the particular

CC growth factor receptor. A specific application is to prevent

CC excessive proliferation of epithelial cells, fibroblasts and

CC excessive proliferation of epithelial cells, fibroblasts and

CC excimer laser treatment other conditions which may be treated include

CC trabeculectomy after glaucoma surgery and corneal clouding after

CC excimer laser treatment other conditions which may be treated include

CC complications, Kaposi's sarcoma and rheumatoid arthritis.

                                                                                                                                                    CC R94001-R94004, R94031, R94032, R94039 and R94040 represent vascular conditions and provided and represents vEGF121. These sequences were used in VEGF conjugates of the invention. In the conjugates, VEGF (or fragments of it) are linked to a targeted agent (this can be via a linker sequence), so that the conjugate binds to a VEGF receptor. Cys-modified forms of VEGF are particularly suitable for chemical conjugation to linkers and targeted agents. The conjugates are used for inhibiting proliferation of cells bearing VEGF receptors. They can be used for treating a VEGF-mediated pathophysiological condition, including dermatological disorders with underlying vascular proliferation, solid tumours or an ophthalmic disorder of hyperproliferating blood vessels of the retina, iris, conjunctiva or vitreous humour. The conjugates can also be used for treating psoriasis, rheumatoid arthritis, skin cancers and other tumours, or varicose veins.

                                                                                                                                                                                                                                                                                                          The present sequence represents human vascular endothelial growth f 121 (VEGF-121). VEGF stimulates production of nitric oxide and prostacyclin. VEGF can therefore be used for treatment or preventio of intimal hyperplasia in a blood vessel. VEGF can be used for treatment or preventing any condition responsive to in vivo stimulation of nitric acid and prostacyclin (especially essential hypertension, pulmonary arterial hypertension (PAH), cor pulmonale and atherosclerosis. VEGF is specifically used to control (re)stenosis, where caused by PAH or by a surgical procedure such as angioplasty, coronary bypass operation, anastomosis or endarteriectomy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-AUG-1997;

compliferating cells. The gene delivery composition comprises a protein chat binds the fibroblast growth factor receptor (FGFR) which is fused or chemically conjugated to a nucleic acid binding domain. The nucleic acid binding domain is complexed with a suitable expression construct encoding a cytotoxin such as saporin. One or more linkers may join the complexed to increase the specificity, toxicity, solubility, serum construct encoding a cytotoxin such as saporin. One or more linkers may join the condensation of nucleic acids for delivery, solubility, serum construct encoded for intracellular availability, and may serve to promote condensation of nucleic acids for delivery to a cell. The fusion protein condensation to FGFR and is internalised by cells that carry this receptor. The function, gene expression and viability of cells. In particular, it may be used for the treatment and prevention of cell proliferative disorders, for example after eye surgery, melanoma and many other sorts of cancer. Crimumatold arthritis, restenosis, Dupuytren's contracture, diabetic retinopathy, psoriasis and eczema. The gene delivery compositions of the invention have high specificity for particular cells and can deliver are mounts of DNA compared to prior art methods. Sequences Al2853-CAl2855 represent cDNA clones encoding vascular endothelial growth factor (HBEGF) procusor, and y90406-y90409 represent CC HBEGF proteins. Al2857 represents cDNA encoding human heparin-binding conferences and represent cDNA correctors and represent cDNA correctors.
                                                                                                                                                                                Query Match

                                  syndrome...toxic shock syndrome, venom exposure, chemical exposure, hypercoagulable, states, platelet activation or aggregation, thrombosis, preclampsia, thrombosis thrombosytopenia purpura, disseminated intravascular coagulation, sepsis, pancreatis, acute renal failure, myocardial infarction, ischemic bowel disease, transient ischemic attacks, stroke, hypoxia or hypercapnia or fibrosis arising from lung endothelium injury, acute respiratory distress syndrome, toxic alveolar injury, pneumonia, pulmonary emboll, birth prematurity disorders, wounds, allergic reactions, hypersensitivity, autoimune diseases, organ transplants, focal glomerulosclerosis, and amyloidosis.
                                                                                                                                                                                                                                                                                                         The present sequence represents native human vascular endothelial growth factor (VEGF) 121. VEGF is an angiogenic factor. VEGF proteins are used for the prevention or repair of injury to blood vessels or associated nonvascular tissues (served by the blood vessels) and for the prevention and repair of vascular injury associated with microvascular angiopathy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 particularly thrombotic microangiopathy. The proteins methods may also be used for the prevention and treatment of kidney diseases associated with injury to, or atrophy of, the vasculature of the glomerulus and interstitium. Conditions which may be treated include haemolytic uremic

RESULT TO SOLUTION OF THE CASE OF THE CASE
Administering vascular endothelial growth factor (VGEF) can be used CC Administration of VGEF promotes angiogenesis and/or vascular or CC capillary permeability. The method is also useful in treating CC capillary permeability. The method is also useful in treating CC disease associated with impaired filtration or prevention of kidney CC disease associated with impaired filtration or excretion of kidney CC associated with alterations, and bone growth disorders; treatment or prevention of hypoxia or hypercaphia or fibrosis arising from CC distress syndrome, toxic alveolar injury, pneumonia, infections, and bone growth disorders; treatment or prevention of filed secretions in the lungs, e.g. acute respiratory CC surgical intervention, cystic fibrosis; treatment or prevention of pulmonary dysfunction arising from injury, pneumonia, infections, CC surgical intervention, cystic fibrosis; treatment or prevention of pulmonary dysfunction arising from injury to the pulmonary pulmonary dysfunction arising from injury to the pulmonary completed transport of fluid and solutes across the intestinal CC prevention of ascites accumulation in the peritoneum; enhancement of cefficacy of solute flux; preservation or enhancement of function of CC efficacy of solute flux; preservation or enhancement of function of CC efficacy of solute flux; preservation or enhancement of function of CC endothelium. The activity of VGEF is mediated by interaction CC endothelium. VGEF exists as five different length monomer chains due
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Multiple cDNAs encoding alternative forms of the VEGF A-subunit were amplified using PCR primers as in Q23049 and Q23050. Three sets of clones were identified. Clone #12 encoded the 164 amino acid deletion and thus encodes a 120 amino acid form and Clone #16 has a 135 bp 72bp insertion and encodes a 120 amino acid form and Clone #16 has a 17 the deleted region lies between the second base of the Asn140 codon protein has Asn140 converted to Lys140.

    The present sequence represents a rat vascular endothelial growth factor II (VEGF II) A subunit variant with a conversion of Asn 140 to Lys 140, was the deletion of His 141 to Arg 184 from the wild-type given in comprising an A subunit from w53639. The present invention describes: (1) a mammalian VEGF II protein from w53639, w53639 or the first 115-135 amino acids of w53638; and 2) mammalian VEGF comprising a heterodimer or homodimer of B subunit a mammalian VEGF comprising a heterodimer or homodimer of B subunits. and for promoting tissue repair.

N.B. The present sequence is not given inthe specification but is derived from Fig 5 as stated in the claim.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cys-Lys-Asn-Thr-Asp from polypeptide T38 (residues 164-168) were used to PCR amplify the central region of the cDNA for VEGF A chain. A single band migrating at 420 bp was gel purified, digested with Sall, ligated into pgEM3Zf(+) and sequenced. The nucleotide sequence cobtained (p4238) was used to design antisense and sense PCR primers are denoted p5-15 and pw3, respectively. In addition to the cDNA coding the 164 amino acid secreted form identified by protein sequencing, two alternatively spliced cDNAs encoding a 146 amino acid and a 214 amino acid forms are cloned and sequenced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-JUL-1998

                                                                                                                                                                                                                                                                                                                                                                 This is the amino acid sequence of a 146 amino acid residue A subunit of vascular endothelial cell growth factor (VEGF). The invention relates to a purified and isolated VEGF C subunit amino acid sequence Y57025. VEGF exists in various microheterogenous forms, and is useful for the promotion of vascular development and repair. The invention also relates to human VEGF heterodimers AC or EC and homodimer CC, where A, B and C are subunit amino acid sequences. The VEGF AC, BC or CC amino acid sequences can be used in a tissue repairing pharmaceutical composition. The novel growth factors are useful for the production or coverage of artificial blood vessels with vascular endothelial cell. They are also useful for the induction of tissue growth and repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US5994300-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is derived from vascular endothelial growth factor (VEGF) 121. The specification describes a monoclonal antibody which is specific to 'VEGF 121, and a hybridoma producing this antibody. The antibody is used in a method for measuring the amount of VEGF 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1999-437318/37.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  R42607
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ulcers, burns, in surgery, in balloon angioplasty and for the invitro culturing of endothelial cells. Hybrid growth factors of pDGF and VEGF can exhibit a mitogenic profile between each factor and e.g. preventing the growth of tumours.

VEGF analogues in which CYS residues are substd. are more stable. See also Q10791-93; Q10796-97; Q10806-08 and Q11099.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         different message splicing, have different properties. In partic. hyper121 does not bind to heparin leaving more of the protein free to bind to VEGF receptor and increase the half-life and distribution of the protein in circulation, whereas hBEGF165 binds heparin strongly finer rescular surfaces in wound healing, e.g. treatment of full-thickness wounds such as dermal ulcers, venous ulcers and diabetic with the protein the increase in wound healing, e.g. treatment of full-thickness wounds such as dermal ulcers, venous ulcers and diabetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              110 rarqekcdkprr 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The two forms of VEFG (Q10797 and Q10917) which arise through different message splicing, have different properties. Best Local 9
                     The present sequence represents vascular endothelial growth factor (VEGF) 121. The specification describes a monoclonal antibody which is specific to VEGF 121, and a hybridoma producing this antibody. The antibody is used in a method for measuring the amount of VEGF 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence of Q44260 contains an open reading frame corresponding to the 165 amino acid human vascular endothelial cell growth factor (hVEGF 165, see R38921). Alternative splicing of the sequence gives a shorter coding sequence which encodes the 121 amino acid hVEGF (see R42607). The full-length coding sequences be generated using PCR with human foetal vascular smooth muscle

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                           This invention describes the novel preparation of biologically active dimers of recombinant human growth factors of the cysteine knot family starting from cellular inclusion bodies. Such dimers are are useful in pharmaceutical compositions and the method provides yields of 31-39.7%, in examples, compared with about 10% for the conventional method (see Biochemistry, 28 (1989) 2956). Y08278-Y08301 are human growth factor

The products of the invention have angiogenic activity. The polypeptide can be used in pharmaceutical compositions for therapeutic or diagnostic use, e.g. for stimulating angiogenesis or tissue repair or for immunomodulation, e.g. by stimulating endothelial cell proliferation or inhibiting dendritic cell differentiation. Nucleic acids encoding the polypeptide can be used in pharmaceutical compositions for DNA vaccination or gene therapy. This sequence represents a protein fragment of a parapox virus D1701 vascular endothelial growth factor (VEGF) homologue.

CC encodes a heparin binding growth factor, HepGF (e.g. VEGF, FGF, HBEGF).

CC a protein synthesis inhibitor and opt. a linker imparting flexibility.

CC an antisense DNA sequence or an inhibitor of elongation factor?

CC coll carrying a HepGF receptor. The conjugates of the invention are

CC used to inhibit cell proliferation in cells carrying the particular cerestive proliferation of principles in to prevent cerestive proliferation of epithelial cells, fibroblasts and crecurrence of pterygii after surgery partic. to prevent crecurrence of pterygii after surgery partic. to prevent cerestive proliferation of epithelial cells, fibroblasts and crecurrence of pterygii after surgery and corneal clouding after tumours, restenosis, psoriasis, Dupuytren's contracture, diabetic xxx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      These sequences were used in VEGF conjugates of the invention. In the conjugates, VEGF (or fragments of it) are linked to a targeted agent VEGF receptor. 'Cys-modified forms of vEGF agents.' So that the conjugate binds to a chemical conjugation to linker sequence), so that the conjugate binds to a chemical conjugation to linkers and targeted agents. The conjugates are can be used for inhibiting proliferation of cells bearing VEGF receptors. They including dermatological disorders with underlying veget receptors. They conjudate a veget for inhibiting proliferation of cells bearing veget receptors. They including dermatological disorders with underlying veget condition, solid tumours or an ophthalmic disorder of hyperproliferating blood vessels of the retina, iris, conjunctiva or rheumatoid arthritis, skin cancers and other tumours, or varicose veins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or preventing any condition responsive to in vivo stimulation of nitric acid and prostacyclin (especially essential hypertension, pulmonary arterial hypertension (PAH), cor pulmonale and atherosclerosis. VEGF is specifically used to control (re)stenosis, where caused by PAH or by a surgical procedure such as angioplasty,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents human vascular endothelial growth factor 121 (VEGF-121). VEGF stimulates production of nitric oxide and prostacyclin. VEGF can therefore be used for treatment or prevention of intimal hyperplasia in a blood vessel. VEGF can be used for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 8;
